UAT & Sign-Off Protocol

7-Day Auto-Approval & Pause Mechanism

Prepared For: Himanshu Singh — Vioratech

Prepared By: Baljinder Singh — Tech Lead & Proprietor, BITSS

Date: May 05, 2026

Classification: Highly Confidential — Binding Execution Copy

1. ASYNCHRONOUS MILESTONE DELIVERY

User Acceptance Testing (UAT) is the formal contractual process by which Vioratech reviews and approves completed deliverables. The 10 payment cycles operate independently; BITSS may submit milestones for UAT out of sequential order.

2. THE 7-DAY AUTO-APPROVAL PROTOCOL & PAUSE MECHANISM

To maintain strict project delivery velocity, the following review protocol is binding:

1. Upon submission of a milestone deliverable, Vioratech is granted a review window of **seven (7) business days**.

2. **Pause Mechanism:** Vioratech may pause the auto-approval clock by sending a formal email to the BITSS Project Manager requesting a hold or detailing required defect revisions within the 7-day window.
3. **Auto-Acceptance:** If Vioratech does not provide any actionable feedback, revision requests, or pause emails within the 7-business-day window, the milestone is legally deemed "Accepted." The associated payment cycle is instantly triggered.

3. DEFECTS VS. SCOPE CREEP

A "Defect" is a feature failing to operate as defined in the approved Technical Roadmap. A "Change Request" (Scope Creep) is a request for new functionality, additions, or architectural changes not present in the original SOW.

Change Requests will not block the sign-off and payment of the current milestone. They will be logged and billed separately.
